Sri Sapthagiri Hitech Polymers, Sivakasi orders another SP Ultraflex machine

Sri Sapthagiri Hitech Polymers, a promising printing and converting company based at Sivakasi is a leading supplier of mono layer virgin poly bags and pouches in HM, LDPE, PP, LLDPE. As costly slitters are not generally opted for in this region, Sapthagiri was initially apprehensive about investing in SP Ultraflex's duplex slitler rewinder. Upon being convinced of the benefits and features of SP's machine, Sapthagiri ordered the PRIMASLIT™ RL duplex slitler rewinder in the year 2014. The machine has been running successfully since installation and has established that investment in SP's machine is indeed value for money. Sapthagiri is now expanding its business setup in an industrial

area spread over 10000 sq. mt. with built up area 65000 sq. ft. for manufacturing of flexible packaging materials. As the focus shifts on Total Quality Management and Zero Wastage, it has ordered another SP machine - high speed fully

reversible Web Inspection Rewinder WIR REV to inspect printed and plain substrates. Order for the second machine reinstates the beginning of a long and strong association between the two companies.
